

Stormwater Detention & Reuse that saves time, space & money.

Aquacomb™ is an innovative detention and retention system designed to manage rainwater and stormwater for New Zealand buildings. Aquacomb™ is a series of interconnected water storage pods that are located within a concrete slab or under driveways or decks. Having your water stored completely out of sight means there's more usable space for the home owner. Aquacomb™ is cost effective and in many cases less expensive than other detention and retention systems. With Aquacomb™

you have the ability to tailor the system to suit your needs. Whether it's to capture 250 or 250,000 litres, Aquacomb™ is

the perfect detention and retention solution that stores water, saves time, space and money.

Aquacomb™ Benefits

- Aquacomb™ requires no additional excavation, earthwork, haulage or disposal costs.
- Aquacomb™ is completely hidden from sight meaning “no unsightly above ground water tanks or pipe work.
- Lightweight and flexible plastic pods means Aquacomb™ is easy to install and can withstand earthquakes.
- Aquacomb™ can be used for both retention and detention at once; potable water storage is also possible.
- Aquacomb™ system is almost maintenance free when installed with silt traps and leaf slides.
- Aquacomb™ is extremely strong and can withstand 2 tonnes of distributed load.
- Equally suitable for large commercial and small residential projects.
- Simple, modular system means no large engineering costs.
- Proven solution: over 10,000 installs in 10 years.

Aquacomb™ water storage compared to other systems

Product features / benefits

Invisible water storage.....

No excavation, digging or tip costs.....

Modular system - can be tailored to suit a job.....

Flexible capacity - 250 to 250,000 litres

Fixed costs - known per litre

Discreet external pipes and simple silt trap

Simple assembly - reduced trades

Protected from damage.....

Laid at grade - solves high invert levels or rocky ground.....
